TRANSFORMING DOCUMENTATION FOR AEROSPACE

DeltaXML is helping documentation specialists in the aerospace industry to transform the efficiency and accuracy of content change and merge.

TRANSFORMING DOCUMENTATION FOR AEROSPACE

WORKING WITH CHANGE IN WORKFLOWS AND EDITORS

MANAGING CHANGE AND MERGE IN AEROSPACE DOCUMENTATION

Whether you are working with S1000D or other document standards, DeltaXML enables your document specialists and automated systems to rapidly identify all the relevant differences between documents and their versions and to automate the processes that underpin quality, compliant documentation.

DeltaXML works within the structure of large, complex documents and is configured to filter out just those changes that are relevant to the task in hand and display them through your existing editor or content management system. It generates specially structured outputs that can be parsed and processed automatically by your workflows.

STREAMLINING ADOPTION OF OEM DOCUMENTATION

Because every aerospace organisation has unique ways of working, new documentation from OEMs can present a significant challenge for version control.

DeltaXML enables operators to review every significant change in new OEM documentation and merge it effectively into their own processes and documents.

SUPERCHARGING EDITING TOOLS AND WORKFLOWS

Market-leading document editors and in-house systems embed the capabilities of DeltaXML to identify the differences you need to know about between different documents or versions.

Its patented approach to structured content comparison means you will never miss a change or be drowned in irrelevant differences.

UNDERPINNING VERSIONING AND COMPLIANCE

In an industry where safety and compliance are paramount, DeltaXML allows you to manage versioning and branching, identifying all the meaningful differences with absolute certainty.

DeltaXML also allows you to generate detailed audit trails that demonstrate where the differences lie and where changes were made throughout every one of your document processes.

your own systems**

TRIAL

Compare XML and JSON data effortlessly, exactly how you need in 3 simple steps.

1

Fill in a form

Head over to www.deltaxml.com/trials and fill in an evaluation request form, letting us know what you're hoping to achieve with the product.

2

Set up the software

We'll get on a call to help guide you through the set-up of the solution. We'll explain the configuration options so you get the most out of your trial.

3

Trial the software

You'll have 14-days, with us supporting you throughout, to experiment with the software within your own projects, products and processes completely free.

DATA COMPARISON IN PRACTICE

OUR PRODUCTS ARE USED BY SMES TO GLOBAL ENTERPRISES WORLDWIDE

SAFELY MERGING MAINTENANCE MANUALS

A major aerospace manufacturer is using DeltaXML to help airlines identify where changes have been made between different versions of their maintenance manuals. Airlines' documentation teams can use the tool to analyse where they previously adapted the content from the OEM and where their colleagues would need to review the new recommended procedures.

HIGHLIGHTING CHANGE IN CRITICAL PROCEDURES

Interactive procedure manuals used onboard spacecraft feature prominent highlighting to alert the astronauts to any steps that have been recently changed. DeltaXML is used in the editing and publishing of these sophisticated checklists, to provide absolute certainty that all meaningful changes have been identified and noted.

STREAMLINING AIRLINE DOCUMENTATION

A European regional airline is using DeltaXML to help manage the extensive internal documentation that is used by employees across the organisation. They are using DeltaXML to provide efficient and cost-effective highlighting of changes to the policies and procedures that are published on their intranet.

EMBEDDING EXTRA VALUE IN SPECIALISED CMS

A leading provider of document management and editing systems for airlines has embedded DeltaXML to add value for editors and end users by identifying and highlighting differences between versions.

DeltaXML is providing sophisticated functionality to identify meaningful differences between different versions of manuals from OEMs, as well as helping editors to review changes quickly and completely.

EXPLORE OUR PRODUCTS

Identifying and managing changes or edits in documents need not be laborious or costly, even when they are essential for compliance, quality or product safety.

DeltaXML is a world leader in developing software tools for change-control and version management. Our tools find, merge, process and synchronise change in XML and JSON data and documents and are used daily throughout the world by governments, banks, aircraft manufacturers, and the defence industry, where 100% accuracy is vital.

When you need to identify changes or recombine differences between complex XML or JSON datasets, visual tools are very time-consuming and error-prone, while custom scripts can become challenging to develop and maintain. Our software is developed specifically to be embedded into your own products or processes so you're left with powerful functionality that looks like what you're used to.

XML Compare

A complete toolkit for reliable XML comparison, finding all the meaningful diffs between any XML file.

XML Merge

A complete toolkit for reliably merging multiple XML documents or datasets into a single file.
